

In Primo Piano

IX INCONTRO DEDICATO ALLE IMPRESE BENEFICIARIE DELLA MISURA H2020-SME INSTRUMENTI Torino, 13 giugno 2017

Il prossimo 13 giugno a Torino alle ore 10.00 presso la Camera di Commercio di Torino si terrà il nuovo incontro con i vincitori SME Instrument, organizzato dalla Delegazione del Comitato di Programma "H2020 PMI e Accesso alla Finanza di rischio", dai National Contact Point di APRE e dalla rete EEN.

L'incontro di Torino sarà arricchito dalla presenza di aziende finanziate in Fase 2 e da alcuni momenti interattivi in cui i beneficiari di Fase 1 avranno l'opportunità di confrontarsi su alcuni aspetti specifici delle loro proposte di Fase 2, insieme alle stesse aziende di F2, agli esperti della delegazione, ai NCP e ai KAM della Rete EEN

I lavori si articoleranno anche in Tavoli di lavoro per le aziende vincitrici SME Instrument (partecipano aziende, coach e valutatori):

- IPR e clausole riservatezza
- Market Analysis e Marketing
- Storytelling e Makeup
- Partenariato

E' necessario registrarsi h2020@to.camcom.it

Nel pomeriggio si svolgerà un seminario volto a dare indicazioni per la presentazione di proposte a valere sullo strumento PMI.

UK Company that designs, manufactures and sells healthcare aids to assist daily living including those for the elderly and disabled is seeking innovative products under a distribution agreement in order to add to their current portfolio

Technology Offer

Solar biomass gasification (TOAM20170512002)

An Armenian company engaged in designing and fabrication of solar energy systems has developed a solar powered biomass gasifier, including concentrating solar technology and biomass gasification. Partners are sought for optimization of the technology under commercial agreement with technical assistance, technical cooperation agreement or research cooperation agreement.

Unique bio-prototyping facility for research and development of high value products using a plant based expression system. (TOUK20170521001)

A UK based bioscience company has established a new state of the art bio-prototyping facility based on plant based technology that allows the expression and production of scalable quantities of bio-active products. The technology provides a quick and scalable method and the opportunity to shorten the development time for new pharmaceutical, agrichemicals, biologicals and complex metabolites. It offers opportunities for research cooperation and technical cooperation agreements.

Novel electric drive system with superior performance - high torque and power density, high efficiency factor, low use of rare earth metals, maximum torque right from start, hollow shaft construction for integration of functional modules/machine tools (TODE20170516002)

German SME offers a novel electric drive system combining the reluctance and the transversal flow principle thus eliminating the disadvantages and exploiting the advantages of both machines: high torque/power density, efficiency, no or 50% less rare earth metals. Hollow shaft construction allows integration of functional modules/tools; applicable where max. torque is needed right from start: pumps, compressors, turning tables, serial production machines, e-vehicles. Licensing or sale of patents.

Microsource energy for autonomous connected objects: a French laboratory is looking for integrators to cooperate under license, research or technical cooperation agreement (TOFR20170517001)

A French laboratory has developed a microsource of autonomous energy dedicated to sensors, embedded systems and mobile devices. The purpose of the technology is to recover thermal energy and convert it into electricity. The little quantity of energy generated could be use for IoT systems and networks for example. The French lab is looking for industrial collaborations to put on the market its technology under various types of cooperation : license, research or technical cooperation agreements.

Unique bio-prototyping facility for research and development of high value products using a plant based expression system. (TOUK20170521001)

A UK based bioscience company has established a new state of the art bio-prototyping facility based on plant based technology that allows the expression and production of scalable quantities of bio-active products. The technology provides a quick and scalable method and the opportunity

to shorten the development time for new pharmaceutical, agrichemicals, biologicals and complex metabolites. It offers opportunities for research cooperation and technical cooperation agreements.

French SME specialises in the maintenance and repair of electronic snowmaking products (TOFR20170427001)

A French SME has developed since 1994 a strong expertise in the field of automation, electronics and information technology. Its expertise enables the company to ensure the maintenance and the repair of snow cannons' circuit boards, currently available on the market or not anymore. The company is looking for a services agreement with ski resorts and indoor ski stations, in order to ensure the maintenance and the repair of their snow cannon's circuit boards.

Israeli SME offers vertically moveable cabinets for houses, kitchens and businesses (TOIL20170516001)

An Israeli start-up develops vertically movable cabinets that increase storage capacity by using room space that is inconvenient to access. The designed cabinets are controlled by a commonly used electrical motion system, thus allowing for affordable pricing. The company is interested in a license agreement to sell its intellectual property and knowledge or, a commercial agreement with technical assistance, in which firms in the field of furniture serve as distributors (maybe also producers).

Novel continuous passive motion machine (TODE20170515001)

A team of German scientists developed a novel continuous passive motion machine (CPM) that can be used for a combined active and passive mobilization of the knee joint and also of the hip joint after an accident or a surgical intervention. Research cooperation agreement or license agreement is offered.

Flexible plastic displays for consumer electronics, car interiors, digital signage and other applications (TOUK20170525001)

A UK company has developed flexible plastic displays for full colour and video. Early adopters come from the automotive, digital signage and consumer electronics segments but the technology is suited to a variety of product applications across different industries. Electronic products developers are sought for technical cooperation agreements.

Technology request

Very urgent request for digital building solutions (TRAT20170522001)

An Austrian SME representing leading companies in the construction and real estate business is looking for start-ups with digital and disruptive software and/or hardware solutions as well as services for planning, building, operating and financing buildings. Completely new ideas as well as transformable solutions from other industries are sought. Commercial, research, technical, joint venture and licence agreements are envisaged.

Therapeutically relevant proteins with no known ligands or poor ligands (TRUK20170323001)

An East of England company has developed a tool to predict ligandable binding sites on protein targets with high accuracy and confidence. They seek industry or academia owning targets of high therapeutic relevance, for which there are no known, or good, ligands available. Type of cooperation: research or technical co-operation agreement.

Novel chemistry and technology for construction and building materials (TRUK20170421001)

The UK arm of an international manufacturer and distributor of construction chemicals is searching for innovative chemistries and technologies. These would save time and improve quality in the application and later monitoring of integrity and functionality of concrete, grout, coatings, flooring systems etc. They may be transferred from different sectors. Industry and academia are sought for joint venture, technical cooperation, licensing and commercial agreements with technical assistance.

French company looking for microencapsulated organic phase change material (TRFR20170316001)

A French company specialises in the supply, manufacture and marketing of quality maintenance products, biological products and industrial paints for a large number of professionals such as industries, local authorities, breeders, oyster farmers, building sector. In order to innovate in their range, the SME is looking for phase change material (PCM) in powder form in microcapsules. A commercial agreement with technical assistance is sought with a partner specialised in microencapsulation.

Manufacturers sought for production of robots dedicated to individuals (TRFR20170502001)

A French start-up has developed a socialization robotic unit for individuals. The company has built a first prototype. It is looking for an industrial partner expert in the fields of electronics and mechanics for technical cooperation and manufacturing agreements, in order to realize a first pre-serie and then the industrial manufacture of this robot.

Reducing noise from wind turbine rotor blades (TRSE20170511001)

A Swedish SME that has developed a new design for large scale wind turbine rotor blades is looking for partners with knowledge in noise reduction. Any knowledge could be considered that would affect or reduce the noise generated by the rotor blades, including e.g. acoustics and aerodynamic design. The company is interested in technical cooperation.

Swedish based producer for vacuum/thermo formed food packaging products seeks suppliers of Amorphous Polyethylene Terephthalate (PET) and Bio degradable sheets (TRSE20160418001)

The Swedish based manufacturer of vacuum formed food packaging products has been active on the market for 12 years. During this period they have delivered products and services linked to the complete process from design, tooling, production and logistics to the main product of vacuum formed food packaging products. In order to expand their product range and to strengthen their position on the market they know seek additional suppliers for their inbound flows of various plastic raw materials.

Speech recognition technology for an innovative platform (TRFR20170404001)

French company active in the digital industry provides a platform for virtual reality business meetings. The company wants to add new features in the platform and seeks technological partners to build a speech transcription feature. Services and licenses agreements are targeted.
